

AFTER COURSE SURVEY RESULTS FOR STUDENTS IN LOGAN DISTRICT

PUBLISHED: January 2018

The data for this table is from students who completed the BRAKE Driver Awareness course. It is from a survey that all students complete. The form is in three parts: why they chose to do the course and knowledge about the course. Finally, the form collects their responses to the course.

The data is in two categories:

1. Sentiment data which is in three parts – positive, positive and neutral and negative
2. Multiple-choice data from the forms which is in five parts, strongly agree, agree, neutral, disagree, strongly disagree.

Students filled survey forms by hand at the end of the course. After collation, the form data was input into a database to produce this summary table

The data shows that only mixed interest in the course initially, but that the student's final perceptions became strongly positive.

Interestingly, students not only thought that the course would be useful to others, 80% expressed a belief that that the course taught them about safe, responsible driving and passenger responsibility.

Only 7% had negative opinions about the knowledge the course provided to help them become "a safe driver in the future".
